

## Question No. 1

### Story for System Admin

#### 1. Landing Page

As a System Admin

I want to see group info and create groups

#### Acceptance Criteria

The landing page will have the following:

- A search bar on the top
  - I can search for the groups with their group name or ID
- Next to the search bar, I see the following filter button where I can filter groups based on location and tags.
- Next to the filter button I should see the add group button.
- I should see table with lists of groups with following columns:
  - ID: Group ID
  - Name: Name of group with the group photo
  - Public or Private
  - Number of members
  - Location.
  - Group Link
  - Action button with edit and delete button. Edit will enable me to open add modal and i can edit a particular group, delete button will allow me to delete the group.

#### 2. Create Group

As a System Admin

I want to create groups

#### Acceptance Criteria

When I click on the add group button, I should see 'Add Group Modal' open. The modal should have following fields:

- Name of group as text field
- Description of group as text area
- Purpose of group as dropdown with data fetched from backend
- Public or Private Group with radio button with Public/Private option
  - If public, group can searched and seen by any users from any groups
  - If private, the group can be only seen by users in the group.
- Member Limitation as radio button with Yes / No option
  - If yes, show the text field to enter the number of limitation
  - If no, then show nothing

- Add People as a Text field. I can search users and add to this group.
- Add group admin as text field Search from users to make group admin
- Group location: Open a google map and let me choose from the map.
- Add a group photo as a file picker.

### **Action Buttons**

- CANCEL [outlined]
- FINISH [disabled] : Gets only enabled when all the validation has passed.

Note: As soon as the user hits the finish button, a group link is generated where the group admin can invite users using the link and the form is submitted in the backend.

## **Story for Group Admin**

### **1. Verify Post**

As a Group Admin

I want to verify posts posted by users.

### **Acceptance Criteria**

I should see the list of posts requested from the users in the table. When I click on one of the post it should direct me to the detail page of that particular post. It should include following options

- It should show all the details posted by the users including pictures, name, description, tags as shown on screen designed by UX.
- At the end I should See Two Buttons.

### **Action Buttons**

- Reject [outlined] : When I click on reject, i should see a text area where I should provide reason why the post was rejected
- Accept Post [Filled]: The post gets accepted

### **2. Create Events**

As a Group Admin

I want to create events for the users

### **Acceptance Criteria**

When I click on the create event button, I should see 'Add Event Modal' open. The modal should have following fields:

- Name of event as text field
- Description of event as text area
- Purpose of event.
- Location of the event.
- Date and time of the event

### **Action Buttons**

- CANCEL [outlined]
- FINISH [disabled] : Gets only enabled when all the validation has passed.

When i click on finish the event is created and can be seen by all the users in the group.
